# MEETING THE CHALLENGE: SHARING DATA IN MULTI-AGENCY PARTNERSHIPS

REBECCA BROWN, MA, CFA, CFRE · CONSULTING EXPERT | 2024 NATIONAL LEAD CONVENING · 10/28/24

## THE PROBLEM

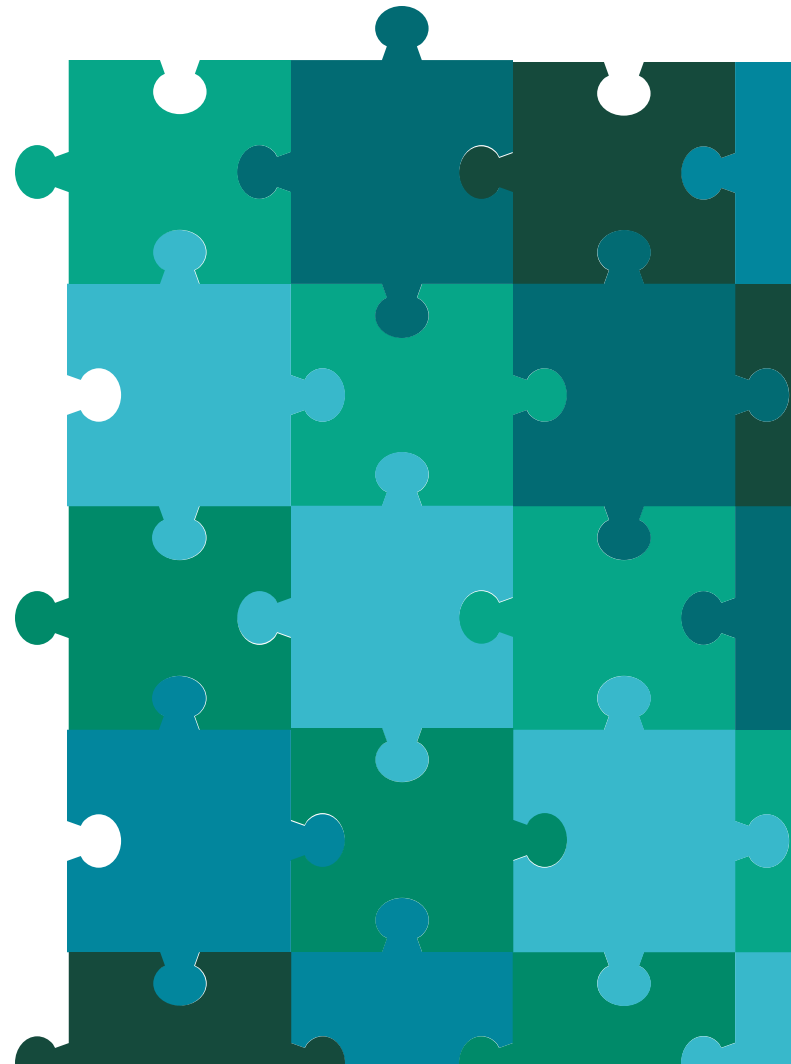

**In multi-agency projects that tackle complex challenges, lots of people need lots of information from lots of places.**

## **THE DATA-SHARING VISION:**

The right tech functionalities, coupled with the right permissions and agreements, bring all the pieces of the multi-agency information puzzle together.

To achieve this, you need...

# ABILITY

Technological Capability

+

Rock-Solid Privacy Protections

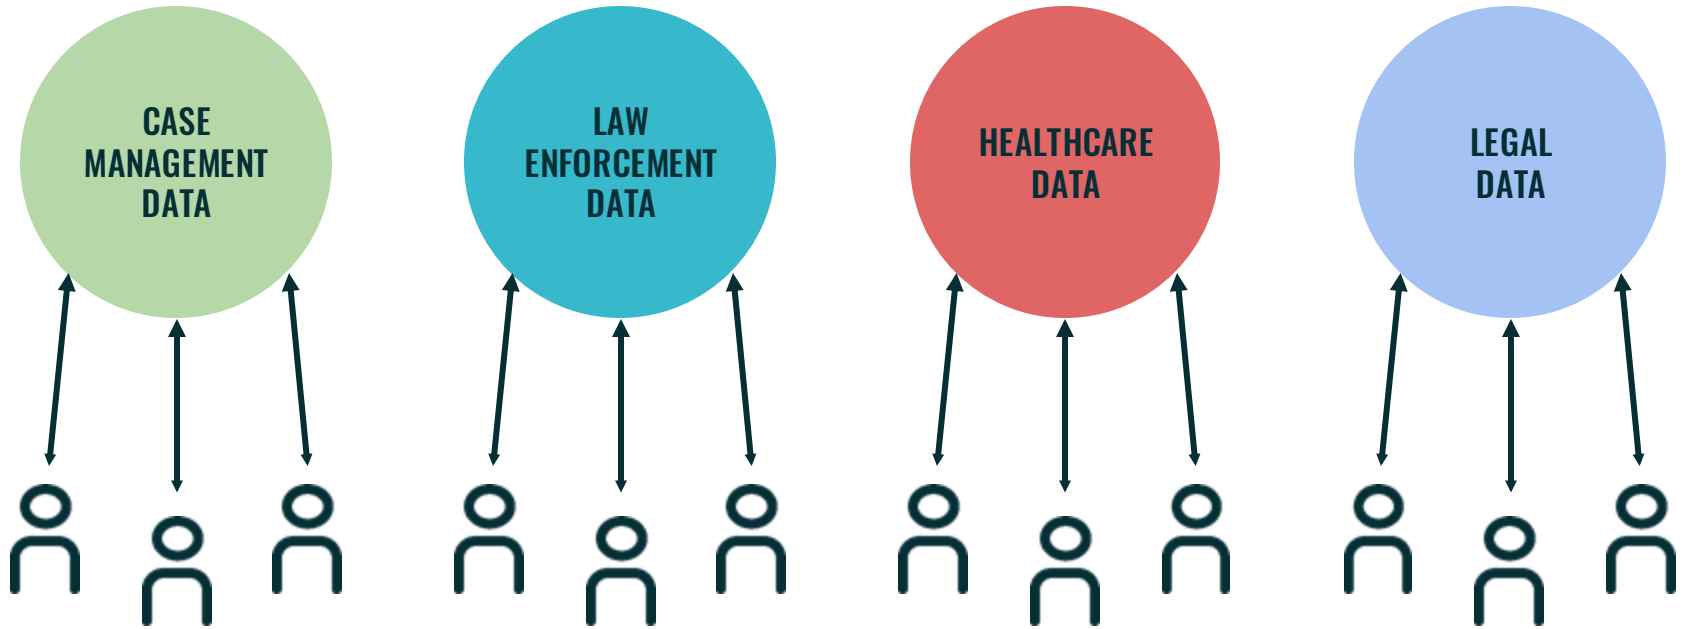

# WILLINGNESS

Purpose-Driven Agreements

+

Structured Collaboration

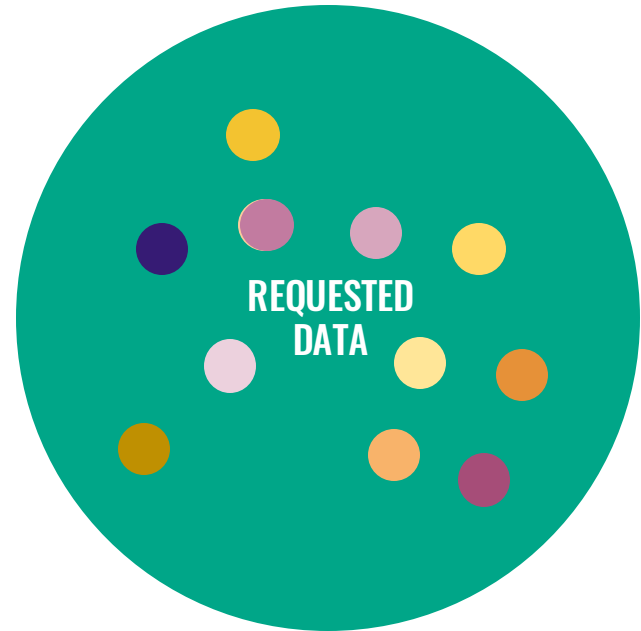

# THE CURRENT STATE OF DATA IN MULTI-AGENCY PROJECTS

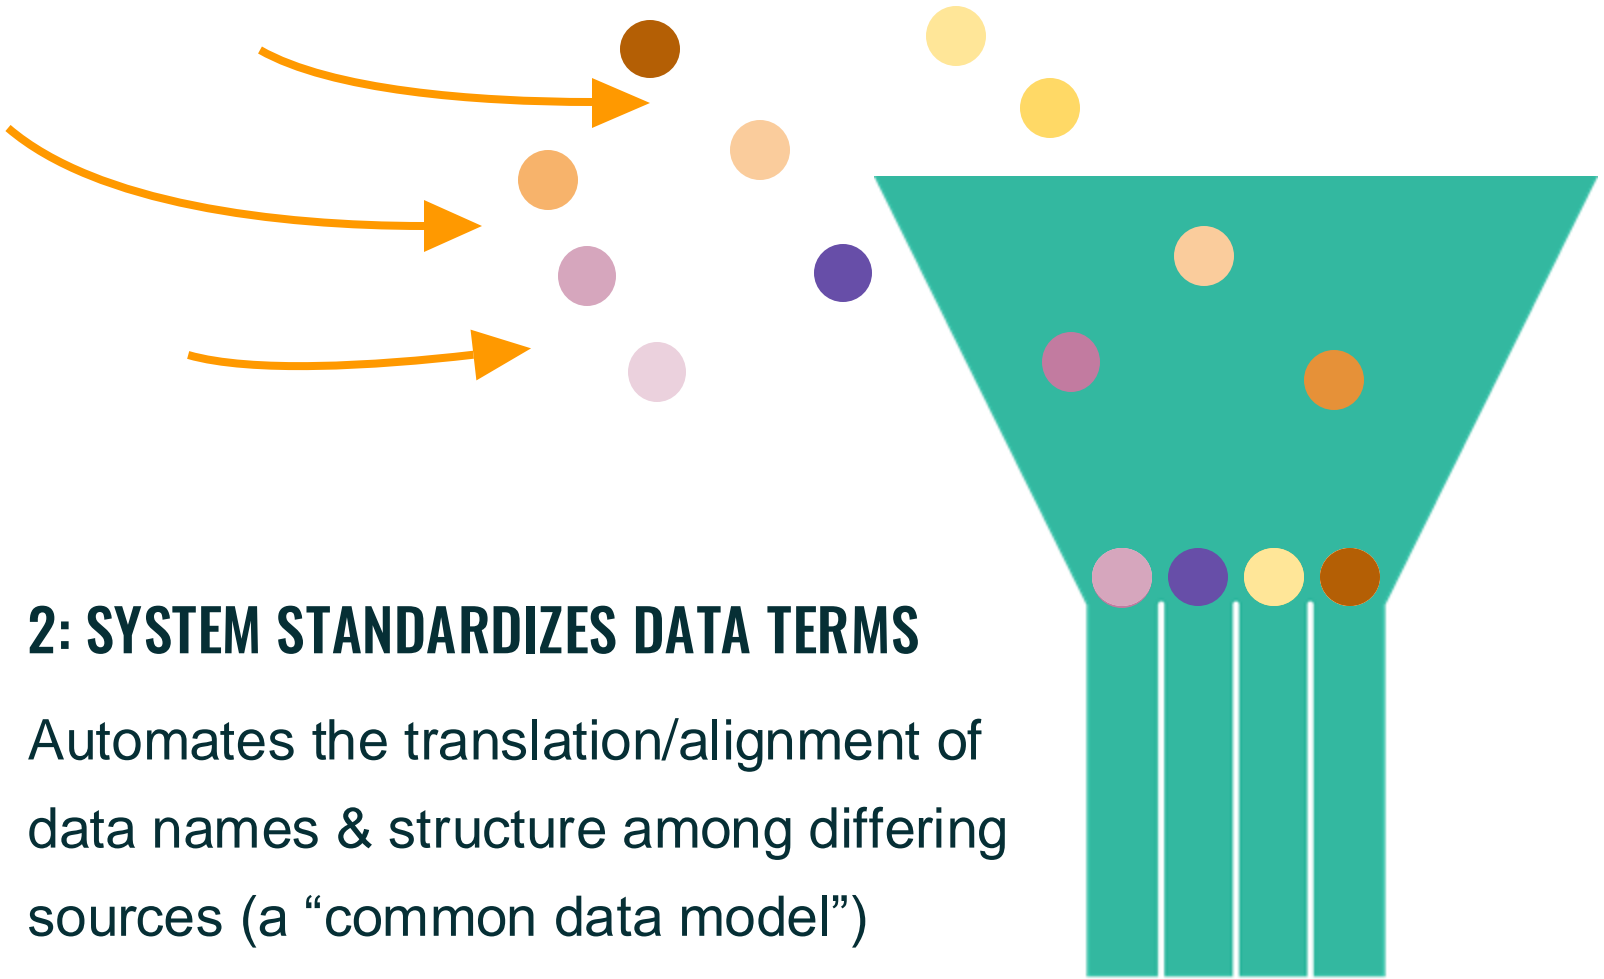

**SAFE & EFFICIENT  
INFO-SHARING & USE  
INVOLVES FOUR ELEMENTS...**

# 1: MULTIPLE AGENCIES PROVIDE LEAD-SPECIFIC DATA SETS

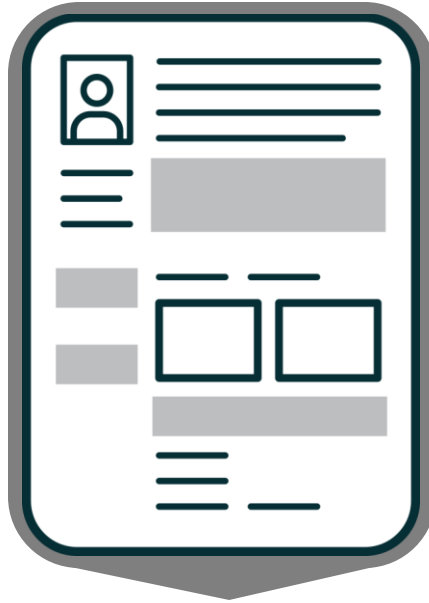

## 2: SYSTEM STANDARDIZES DATA TERMS

Automates the translation/alignment of data names & structure among differing sources (a “common data model”)

### 3. SYSTEM MAINTAINS USER-SPECIFIC PERMISSIONS

PROVIDING JUST THE RIGHT INFORMATION, AT JUST THE RIGHT MOMENT, FOR JUST THE RIGHT USE

## 4. CULTURE SHAPES PROPER USE OF INFORMATION

# WHY THIS MATTERS

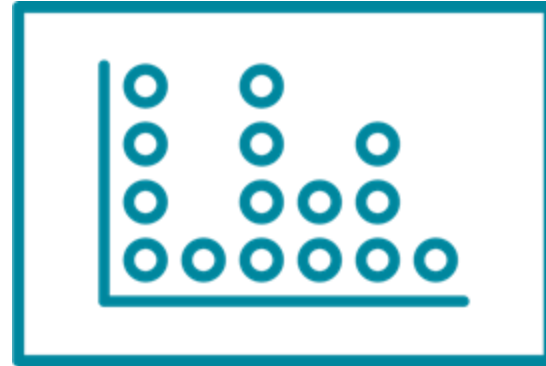

**The same data set - with differing controls - can serve both local and regional/statewide purposes.**

**LOCAL**

**Identifiable  
Individual Data**

**REGIONAL**

**De-Identified  
Aggregated Data**

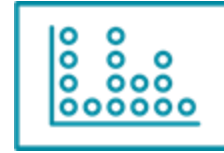

# LOCAL VALUE

- **Improve individual outcomes:** Streamline case coordination, reduce service barriers, better match priorities to relevant resources
- **Foster collective effectiveness:** Support interagency workflow processes, reduce redundancies, increase efficiencies
- **Enable local systemic analysis:** Integrate diverse data sets, cultivate local needs and gap analysis, inform planning efforts

# REGIONAL/STATEWIDE VALUE

Know what's happening, learn what's needed, see what works

- Standardize expectations and methods for data & reporting
- Streamline replication and expansion processes
- Facilitate consistent regional/statewide evaluation strategies
- Enable population-level analyses
- Examine regional service capacity, utilization, and needs
- Differentiate effective strategies

**ADVANCING THIS EFFORT**

# WE'VE BEEN STUDYING & LEARNING FROM THE FIELD:

## LESSON 1:

Multi-agency data/tech solutions intended for widespread use require standardized baseline design, centralized and accessible support, and phased roll-out.

## LESSON 2:

These solutions should draw on subject-matter expertise to convey the primary program model's operations, goals, and principal outcomes and metrics.

## LESSON 3:

As a minimum viable product, such solutions should exist at the intersection of feasible, necessary, and valuable (and these take time to define).

# ADVANCING THE FIELD WITH A LEAD-NORMED PLATFORM

We're developing a **standardized** tech platform specifically customized for LEAD and LEADaligned projects.

- LEAD-normed data vocabulary to enable interoperability
- LEAD-normed work processes (e.g., referrals, intake, service delivery, systems change)
- Reflecting the LEAD logic model and fidelity framework
- Providing standardized report templates (internal and external)
- Enhancing capacity for gathering data/reporting on participant input, systemic change metrics
- Won't require current users to switch – the updated version will embed updated capacities

So, we're advancing

**ABILITY**

In turn, this can advance

**WILLINGNESS:**

which is where **you** lead the way

- **Talk to your partners** about the possibility, feasibility, and value of tech-enabled data-sharing in your site
  - Illuminate importance and purpose of multi-party ROI
  - Discuss methods to cultivate standards and practices for proper use of information
  - Elevate awareness of information control/privacy protections via permissions and de-identification
- **Talk to us** about your tech/data strategic options!

In turn, this can advance  
**WILLINGNESS:**  
which is where **you** lead the way
